Remark

1、It is recommended that customers install over-voltage and under-voltage protection and surge protection devices in the lamp power supply circuit to ensure the safety of electricity consumption.

2、The led driver is used in combination with terminal equipment as a part of the whole lamp. As EMC performance is affected by LED lamps and wiring, terminal equipment is manufactured The supplier needs to re-confirm the EMC of the whole set of equipment.

3、Please use the debugging plastic cross or slotted screw driver to adjust the current of the led driver, otherwise it is easy to damage the potentiometer. (the use of a 2mm screwdriver is also acceptable. The torque should not exceed 0.5knm, and a good insulation screwdriver should be used.)

4、When adjusting the output current of the led driver, ensure that the total output power does not exceed the rated maximum power

5、 The parameters above including the power factor, THD, efficiency are all tested under the ambient temperature 25℃ and humidity 50%, AC input 230V and 90% output load.
